

Создам Dockerfile и отредактирую его, вставив содержимое файла из репозитория ([getgrav/docker-grav](https://github.com/getgrav/docker-grav)):

```
imperatordenisergeevic — zsh — 80x24
imperatordenisergeevic@MacBook-Air-Polemarh ~ % touch Dockerfile
imperatordenisergeevic@MacBook-Air-Polemarh ~ % ls
Applications      Documents          Music
Creative Cloud Files  Downloads          Pictures
Desktop            Library            Public
Dockerfile          Movies              PycharmProjects
imperatordenisergeevic@MacBook-Air-Polemarh ~ % nano Dockerfile
```

```
imperatordenisergeevic — nano Dockerfile — 80x24
GNU nano 2.0.6      File: Dockerfile

# Create cron job for Grav maintenance scripts
RUN (crontab -l; echo "* * * * * cd /var/www/html;/usr/local/bin/php bin/grav s$

# Return to root user
USER root

# Copy init scripts
# COPY docker-entrypoint.sh /entrypoint.sh

# provide container inside image for data persistence
VOLUME ["/var/www/html"]

# ENTRYPOINT ["/entrypoint.sh"]
# CMD ["apache2-foreground"]
CMD ["sh", "-c", "cron && apache2-foreground"]

^G Get Help  ^O WriteOut  ^R Read File  ^Y Prev Page  ^K Cut Text   ^C Cur Pos
^X Exit      ^J Justify   ^W Where Is   ^V Next Page  ^U UnCut Text ^T To Spell
```

В этом же каталоге создам файл для сборки и запуска grav – docker-compose.yml. Помещу содержимое репозитория в данный файл.

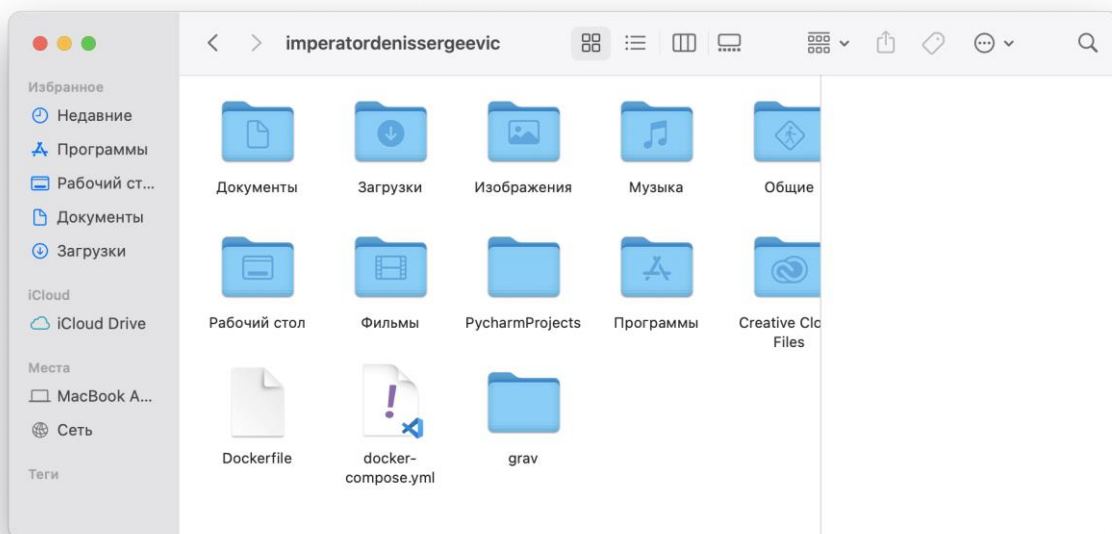

```
imperatordenissergeevic — zsh — 80x24
imperatordenissergeevic@MacBook-Air-Polemarh ~ % touch docker-compose.yml
imperatordenissergeevic@MacBook-Air-Polemarh ~ % nano docker-compose.yml
imperatordenissergeevic@MacBook-Air-Polemarh ~ % cat docker-compose.yml
volumes:
  grav-data:
    driver: local
    driver_opts:
      type: none
      device: $PWD/grav
      o: bind

services:
  grav:
    build: ./
    ports:
      - 8080:80
    volumes:
      - grav-data:/var/www/html
imperatordenissergeevic@MacBook-Air-Polemarh ~ %
```

В текущем каталоге создам подкаталог grav, в который буду загружать содержимое сайта.

```
imperatordenissergeevic — zsh — 80x24
imperatordenissergeevic@MacBook-Air-Polemarh ~ % mkdir grav
imperatordenissergeevic@MacBook-Air-Polemarh ~ % ls
Applications      Downloads          Public
Creative Cloud Files  Library           PycharmProjects
Desktop           Movies            docker-compose.yml
Dockerfile        Music             grav
Documents         Pictures
imperatordenissergeevic@MacBook-Air-Polemarh ~ %
```

**Загружу базовый архив grav, чтобы положить его в текущий каталог.**

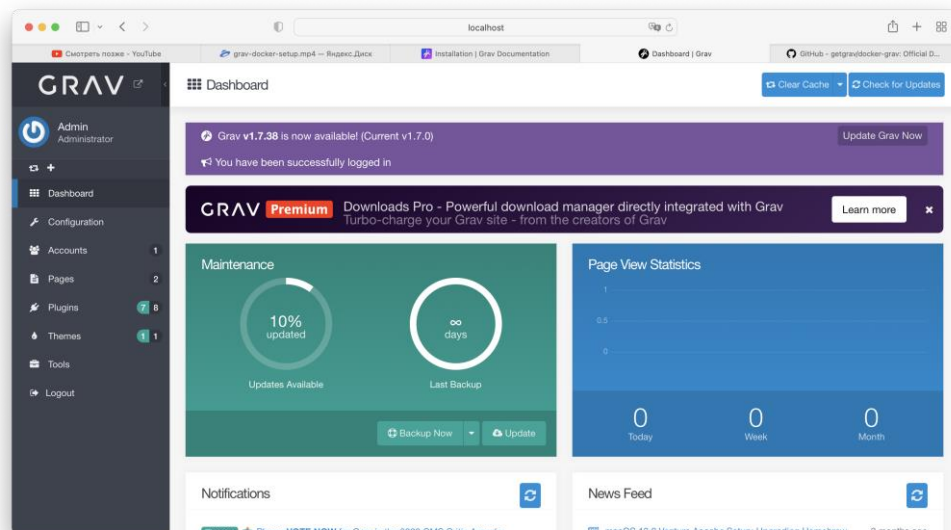

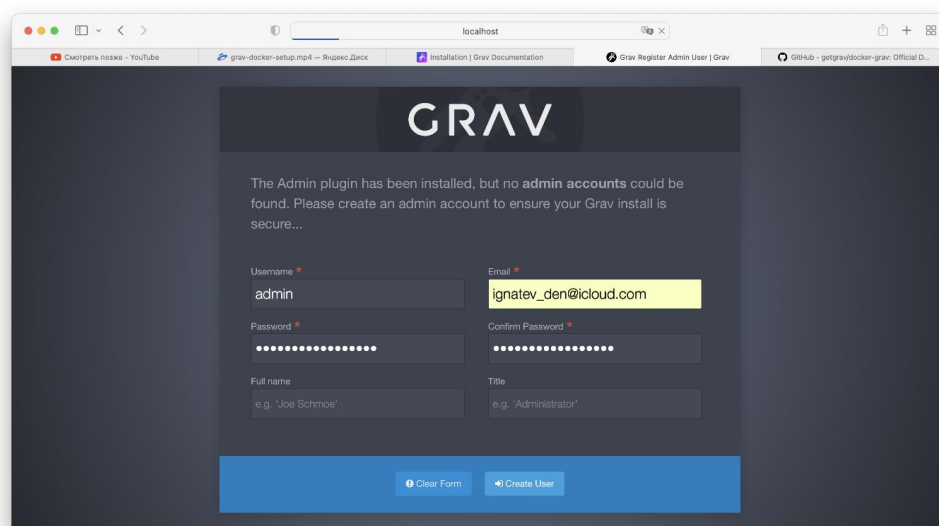

**Выполню команду «docker-compose up». Начался процесс сборки образа из Dockerfile.**

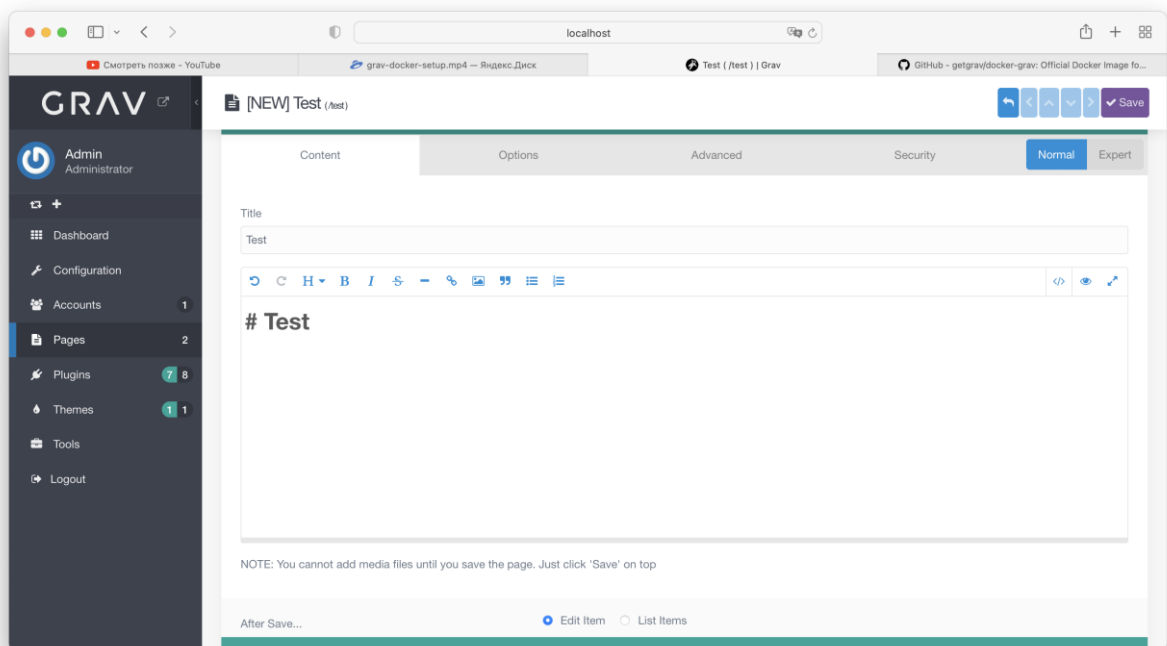

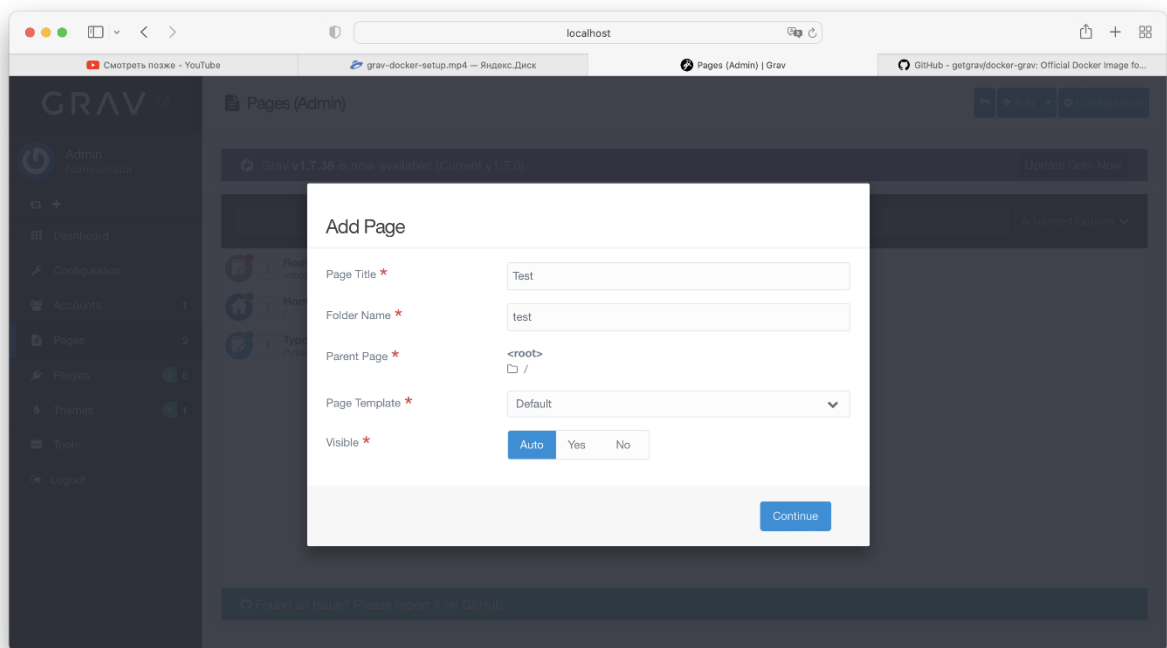

```
imperatordenisergeevic — zsh — 80x24
imperatordenisergeevic@MacBook-Air-Polemarh ~ % cd grav
imperatordenisergeevic@MacBook-Air-Polemarh grav % ls
CHANGELOG.md      bin                now.json
CODE_OF_CONDUCT.md  cache             robots.txt
CONTRIBUTING.md   codeception.yml   system
LICENSE.txt        composer.json     tests
README.md          composer.lock     tmp
SECURITY.md        images            user
assets             index.php         vendor
backup             logs              webserver-configs
imperatordenisergeevic@MacBook-Air-Polemarh grav % cd ..
imperatordenisergeevic@MacBook-Air-Polemarh ~ % docker-compose up
```

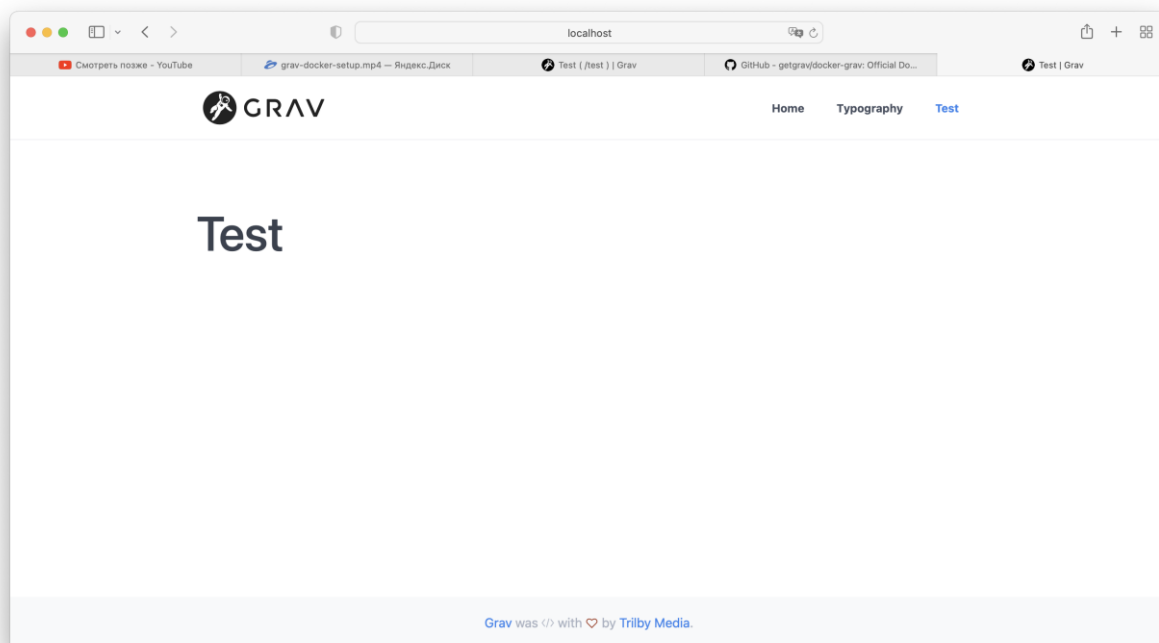

```
imperatordenissergeevic — docker-compose — docker compose up — 80x...
=> [7/9] WORKDIR /var/www 0.0s
=> [8/9] RUN curl -o grav-admin.zip -SL https://getgrav.org/download/core 3.9s

```

После успешной сборки открою браузер и перейду по адресу: localhost:8080. Провожу регистрацию пользователя.

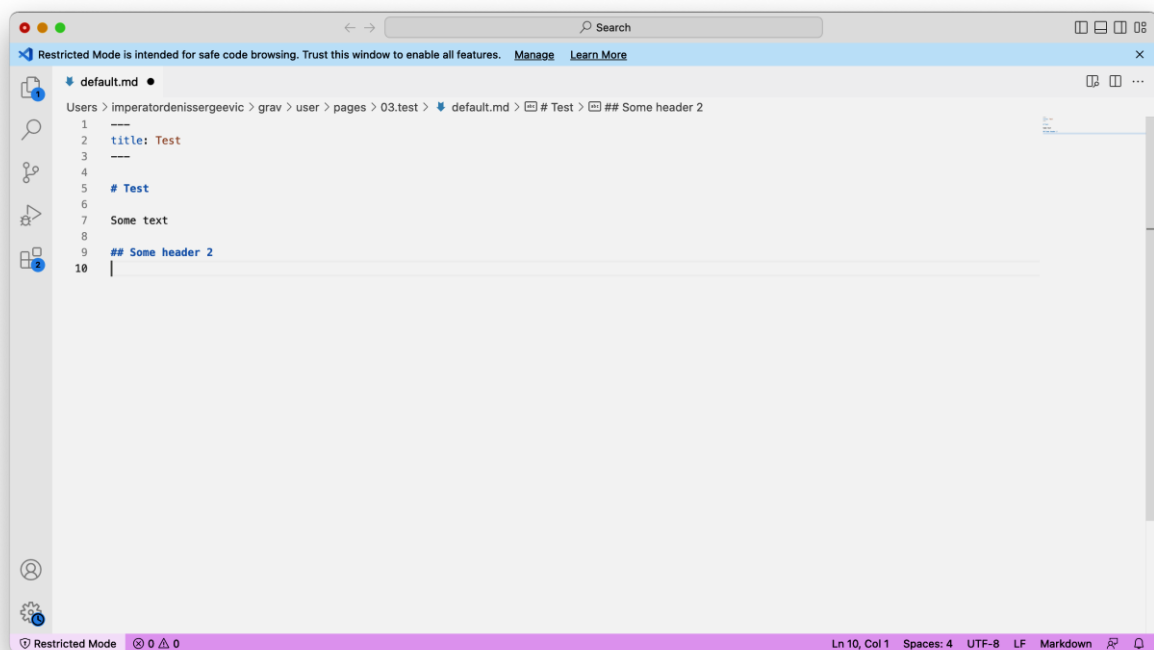

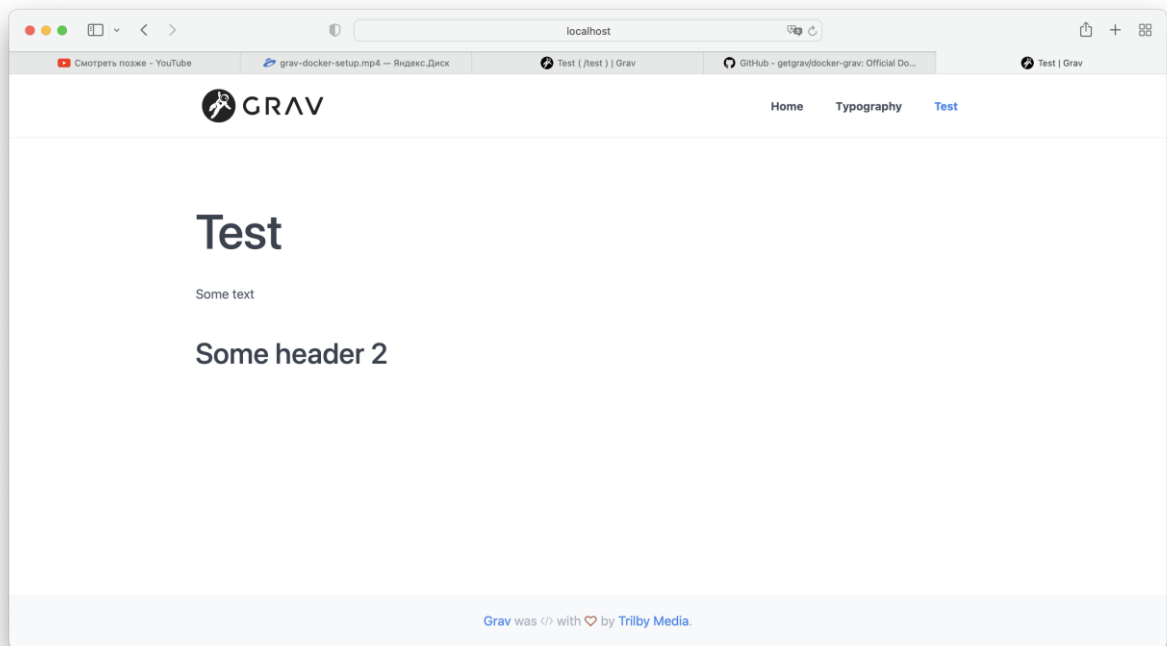

Перейду в раздел «Pages» и создам новую страницу. Введу некоторый текст и открою созданную страницу.

**Нам предоставляет возможность отредактировать страницу как в админ-панели, так и локально на компьютере.**

Есть два способа остановки контейнера: с помощью сочетания клавиш «Ctrl + C» или с помощью команды «docker-compose down».

```
imperatordenisergeevic — -zsh — 80x24
